## THE CURRENT GLOBAL STOCKPILE OF PPE IS INSUFFICIENT DUE TO SURGING GLOBAL DEMAND.

The **“Grab to go”** Face Shields were designed to serve a simple function:  
To provide an affordable and convenient to use product that offers protection against splash and splatter of fluid borne pathogens

To keep pace with surging demand, we have incorporated the use of a simple design, high quality but economic materials and scalable, advanced manufacturing techniques

Our current capacity of 200,000 pieces per week is the result of a highly scalable industrial process. We can easily expand to multiples of this figure and avoid dependency on inefficient processes like 3 D printing

Designed for procedures and environments where risks of exposure to blood and/or bodily fluids through splashing is possible

The Face shields use a headband designed to maximize airflow to prevent fogging and maintain high visibility

It can also be worn over prescription eyewear and face masks, an attribute that is a “must-have” for healthcare and industrial use

**KAVAS** | कवस

THE LARGE SIZE OF THE VISOR ALLOWS FOR MORE FACE COVERAGE ENSURING BETTER PROTECTION.  
THE SHIELDS PROVIDE ENHANCED COVERAGE AND ARE AVAILABLE IN FULL LENGTH OF 210 MM

# USE & SANITATION

The visor can be cleaned with sanitizing solutions and re-used with limited washes

## HOW TO WEAR

Hold the forehead rest on one hand and the strap in the other

1

2

Place the piece on your forehead while use the other hand to pull the elastic and slide over the back of your head

**HOWEVER, ITS NOT ADVISABLE TO TREAT IT AS A RE-USABLE PRODUCT BEYOND AS THERE IS A RISK OF PATHOGENS SETTLING IN ONTO SOME SURFACES BEYOND A POINT**
